

Brand Guidelines

Version 1 – 10th December 2024

This is a controlled document for internal purposes only.

Introduction

This Brand Guide has been produced to ensure that printed and electronic communications are of a consistently high and uniform standard. They strike the balance between the need for a consistent look and feel but that also provides for flexibility for different applications.

To ensure our brand marks are always reproduced correctly, digital master artwork is available to all those inside or outside TurfTrax who are involved in producing communications material.

Master Logo

Full colour

The TurfTrax identity is a graphic representation of our company, its professionalism and core values.

The logo can be used where the company is targeting a new target audience or the audience may not be familiar with the brand.

The simplified Icon can be used when the size is to be greatly reduced and the identity is not clear enough to read.

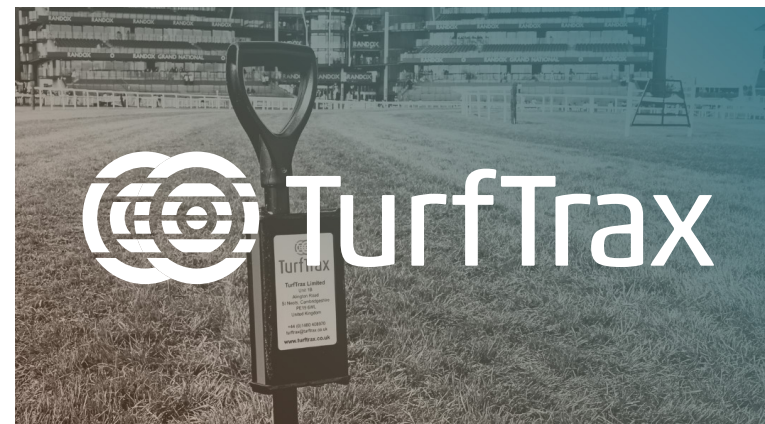

Master Logo

Black and white

The black logo should only be used on light background colors and when full color reproduction is not possible.

The white logo can be used over photography, graphical treatments and patterns which provides sufficient contrast, or over a black background when color reproduction is not possible.

Sub Identities

Our sub-brand is a secondary brand that's related to the parent brand.

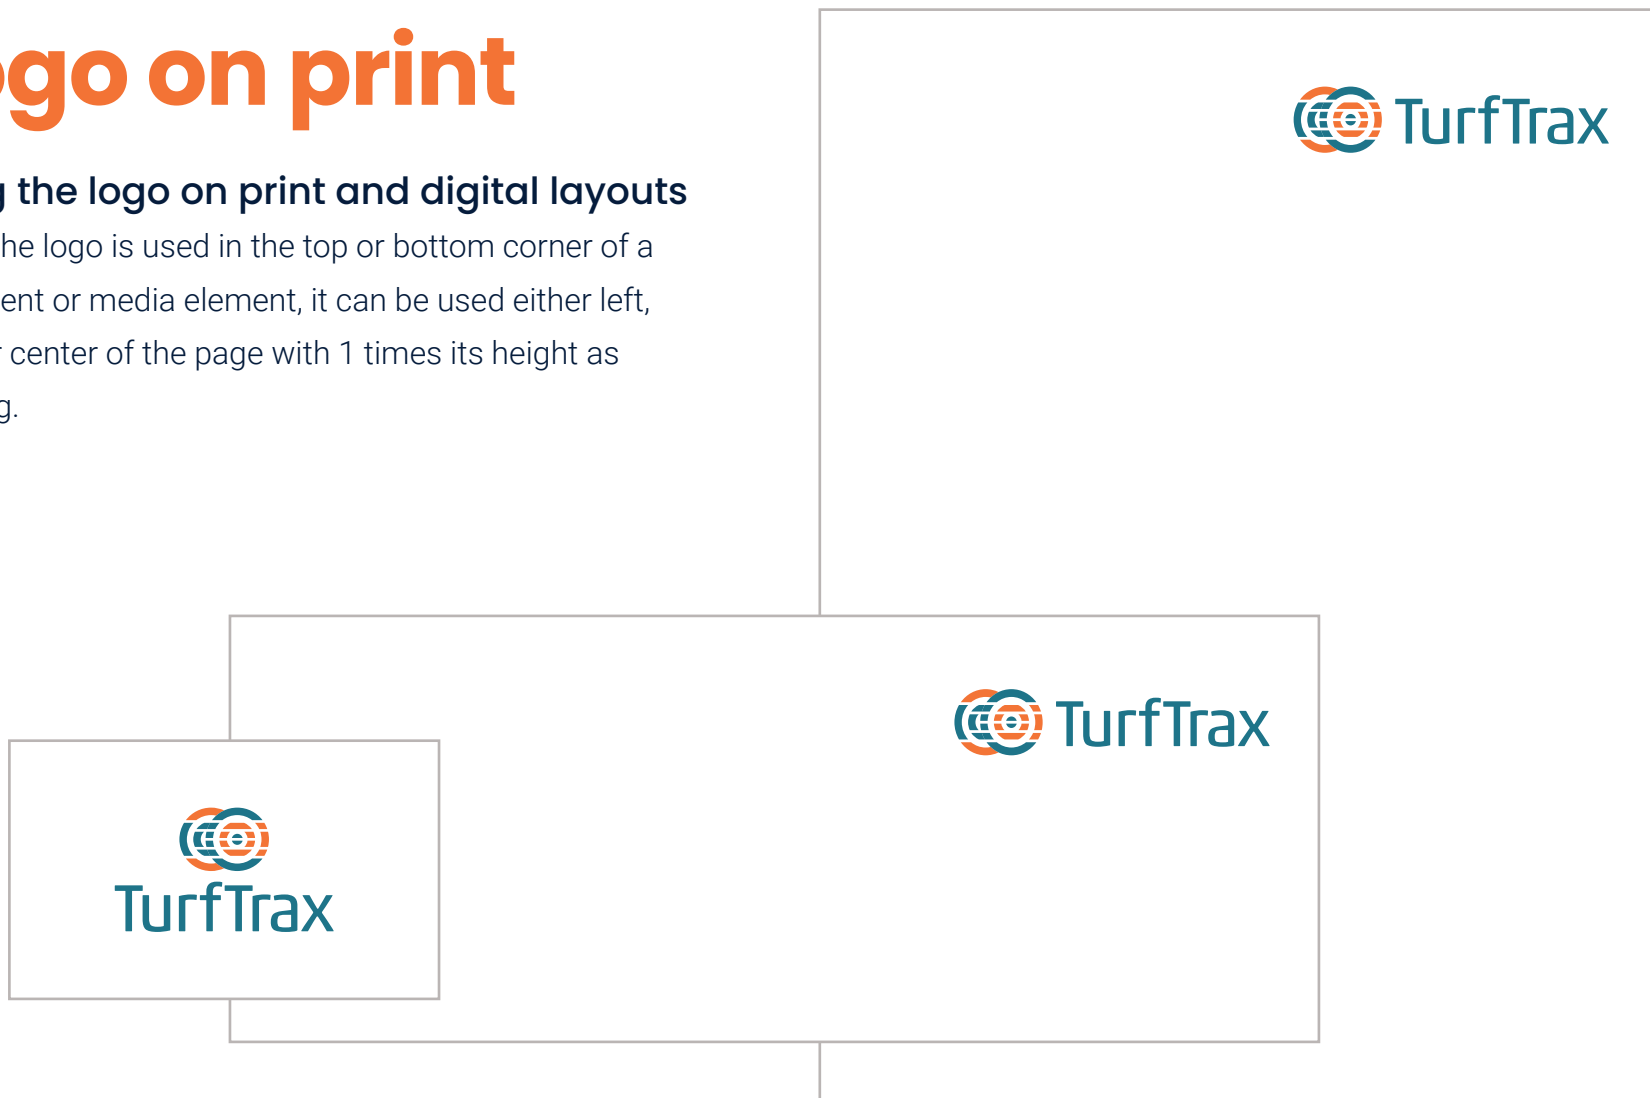

They can be used to target new markets or launch new products without diluting our main brand.

Logo on print

Using the logo on print and digital layouts

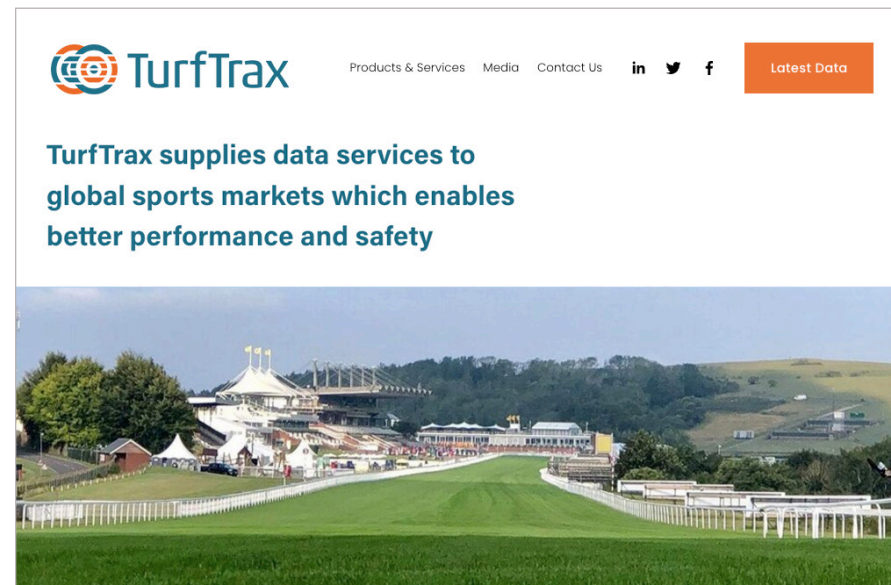

When the logo is used in the top or bottom corner of a document or media element, it can be used either left, right or center of the page with 1 times its height as spacing.

Logo on media

Using the logo on social media and websites

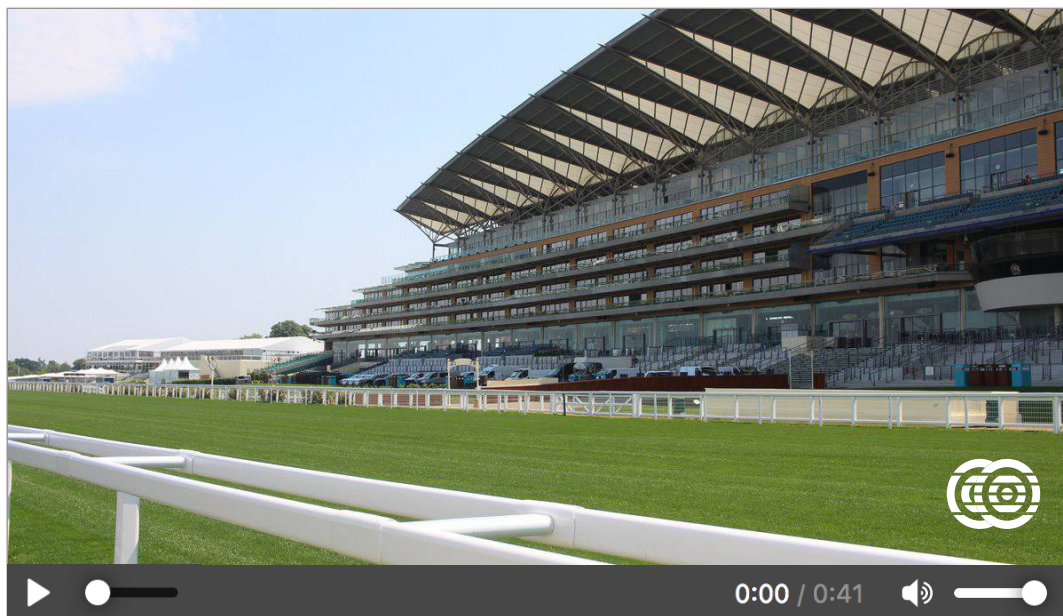

The logo can be used only as intended, either positioned above the content or as part of the footer content.

Logo on video

Logo semi opaque and white out

Logo should be used 100% opacity on all video material where the logo is visible at all times bottom right.

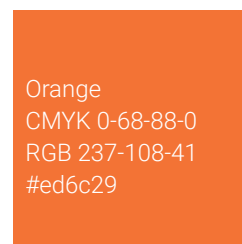

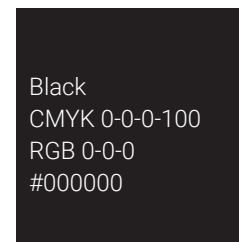

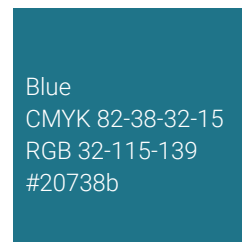

Colour palette

Colour

A consistent image is key when building a strong brand identity. Colour plays a major role in this.

TurfTrax primary colour palette consists of 4 primary colours and 2 secondary colours.

Primary

Secondary

Typography

Typography for web and print

TurfTrax use Poppins for main headings, sub headings and Roboto for body copy.

Various weights can be used to distinguish visual hierarchy, but the copy style needs to be clean and fresh. As a rule, body copy should never be smaller than 10 point, 11 point for subtitles and 20 point for headings. Adjustments to these sizes might need to be made on certain documents where these font sizes do not work visually.

Proper line spacing is key in maintaining a consistent visual style. For email copy if the above cannot be used we recommend using a web safe font Arial.

Headings and Subheadings

Main headings
